

Houston Methodist Hospital

12th Annual Multimodality CV Imaging for the Clinician

CMR for Acute Coronary Syndromes

Raymond Y Kwong, MD, MPH

Director, Cardiac Magnetic Resonance Imaging

Cardiovascular Division, Department of Medicine, Brigham and Women's Hospital

Professor of Medicine, Harvard Medical School

Presenter Disclosure Information

I **have the following** relevant financial relationships to disclose:

Employee of: **Brigham and Women's Hospital**

Consultant for: **Bayer AG, Xylocor, Valo Health**

Stockholder in: **None**

Research support from: **NHLBI**
Bristol-Myers Squibb
Alynlam Inc.
Cytokinetics

Honoraria from: **None**

Cardiac MRI for Acute CP Syndromes

Function

LGE (Scar)

T2W = edema

Perfusion

Tissue Mapping (T1 and T2)

Fatty Infiltration

Case 1

63 y/o male MGH ER with intermittent CP, negative trop and negative rest ECG

Cine show
wall
motion

LGE
shows
infarct

Cath:
Non-dominant
LCx thrombus

ACS

Perfusion
deficit

T2W:
edema
from acute
injury

Case 2

65 y/o female intermittent CP x 3 days, negative trop and biphasic T waves V1-V3

Cath:

Proximal LAD >90% w thrombus

ACS: viable and hibernating
myocardium

Urgent PCI at 3 am

Initial Presentation

1 Month after LAD PCI

Case 3: Acute CP in ER, - trop and ECG, CMR Study in 25 minutes

Regadenoson Stress then Rest CMR Perfusion

Acute chest pain, negative Trop: CMR Study in 25 minutes

Acute Ischemia

CP subsided after PCI

Case 4

53 y/o male w acute CP, multiple coronary risk factors, STE V1-V4, STD inferior leads, Trop 1200 (nl<18) Cath: No coronary stenosis, told probably spasm

Cine

LGE

Acute myocarditis

Perfusion

T2W: edema

Parvo 16: IgG positive

Case 4

53 y/o male physician with STE V1-V4, STD inferior leads, Trop 1200 (nl<18)

Initial
Presentation

Cine

LGE

6 Months
Later

Case 5

70 y/o female intermittent CP, VT storm, neg ECG, Trop 400 (nl<18), no stenosis on cath
hsCRP 40, ESR 50, FDG PET: cardiac sarcoid

Cine

LGE

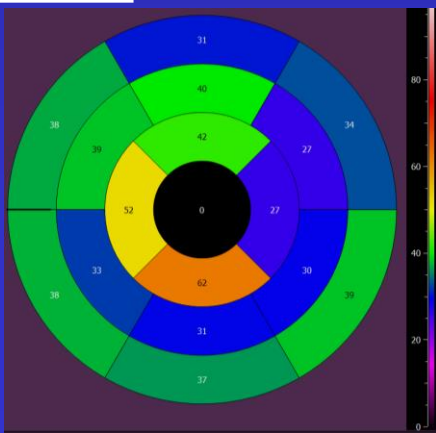

Biopsy:

Giant cell myocarditis

T2W

T1 and ECV mapping

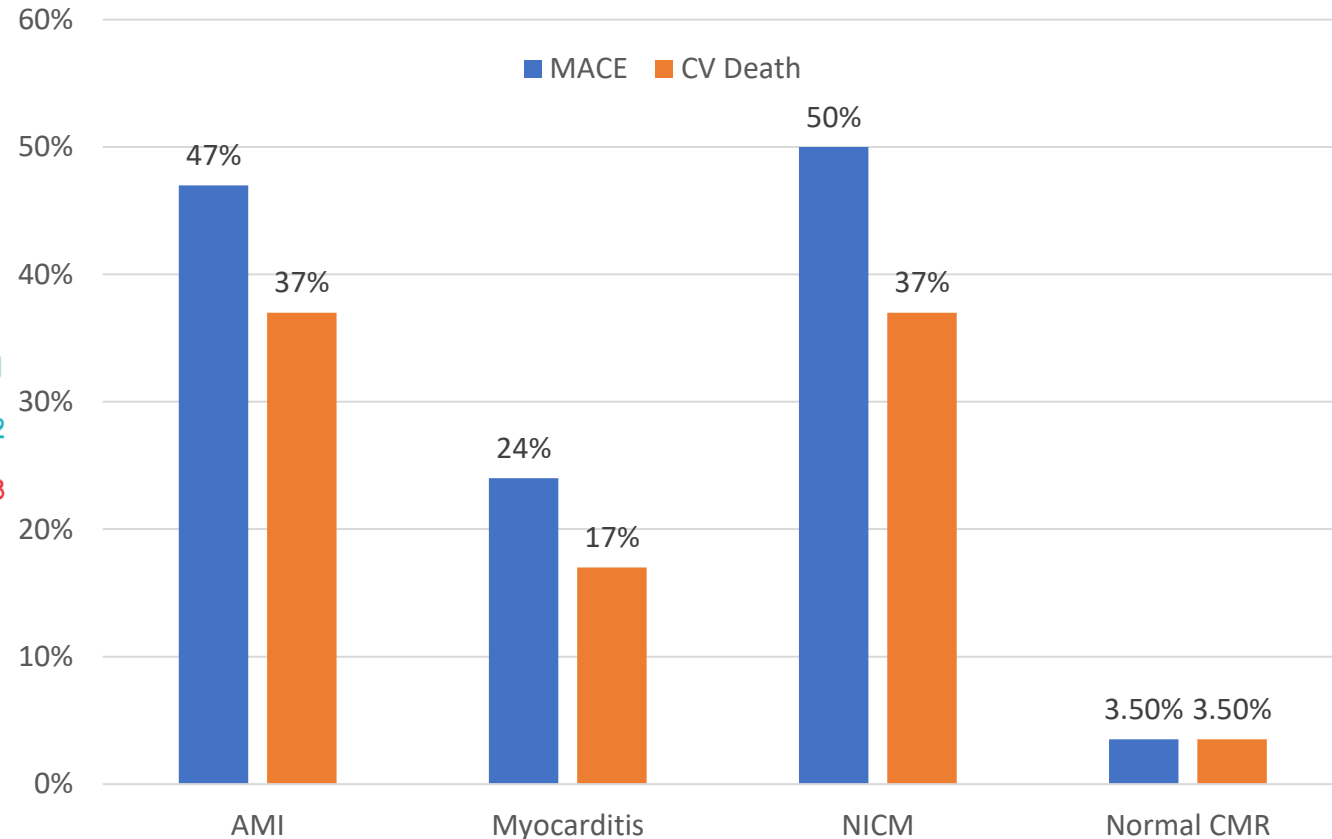

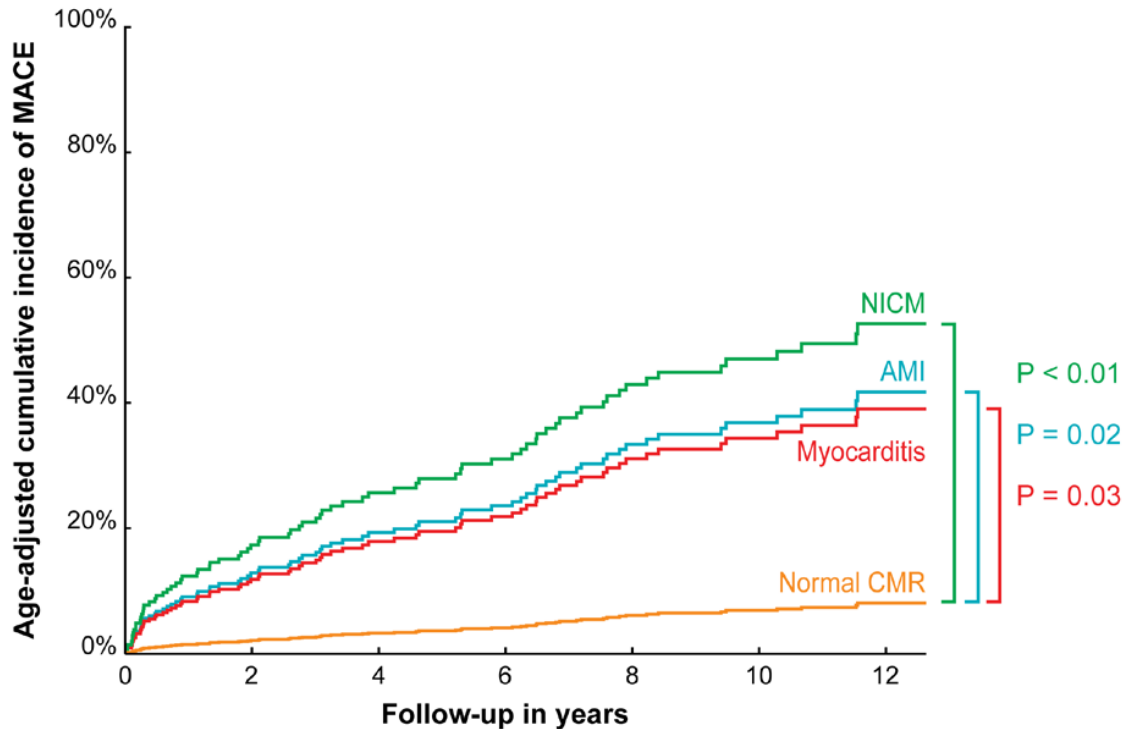

T2 mapping

Prognosis by CMR Findings

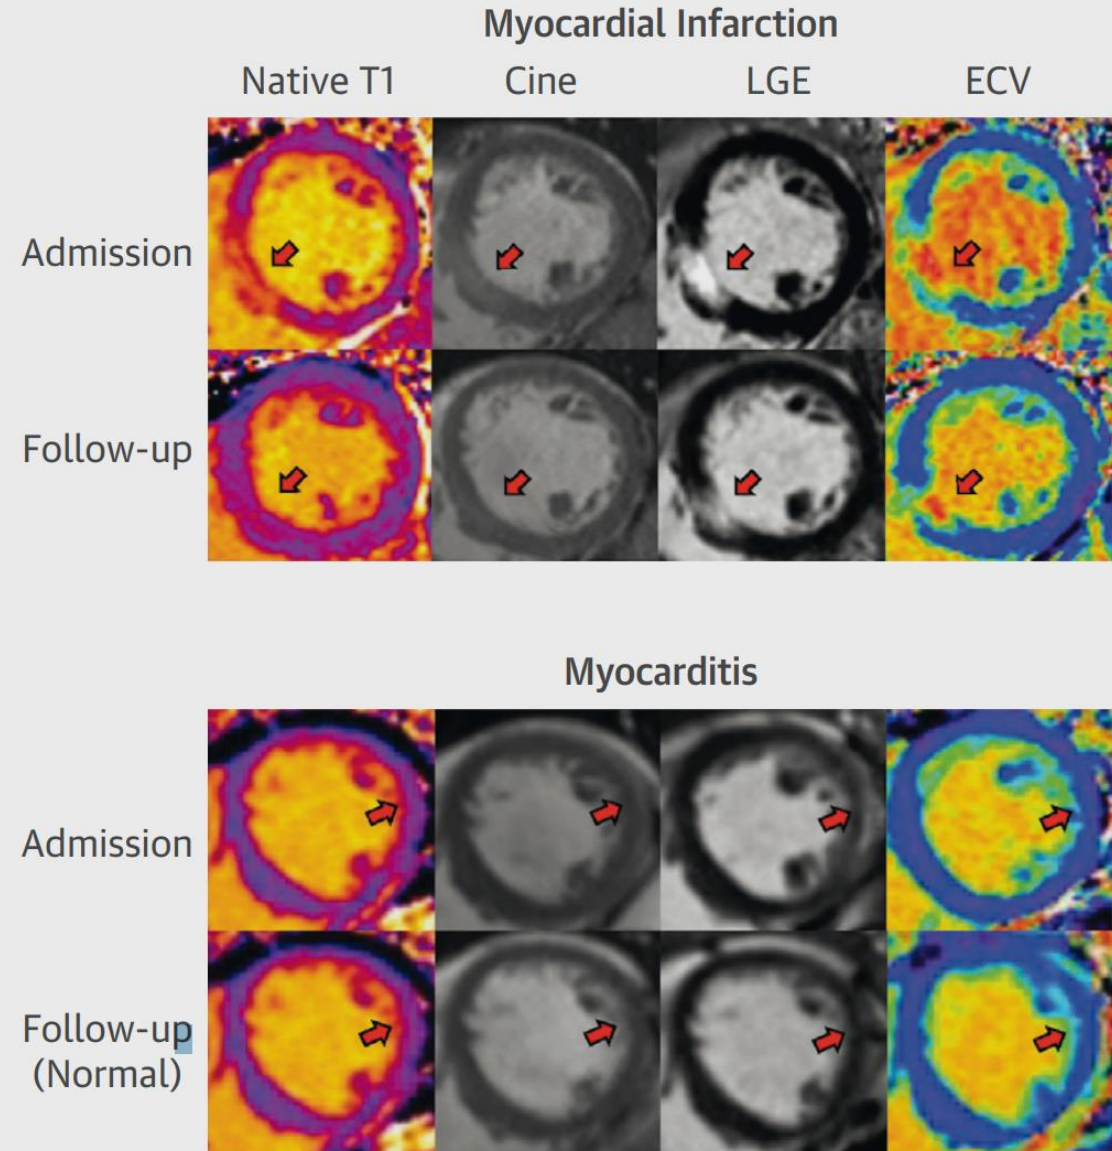

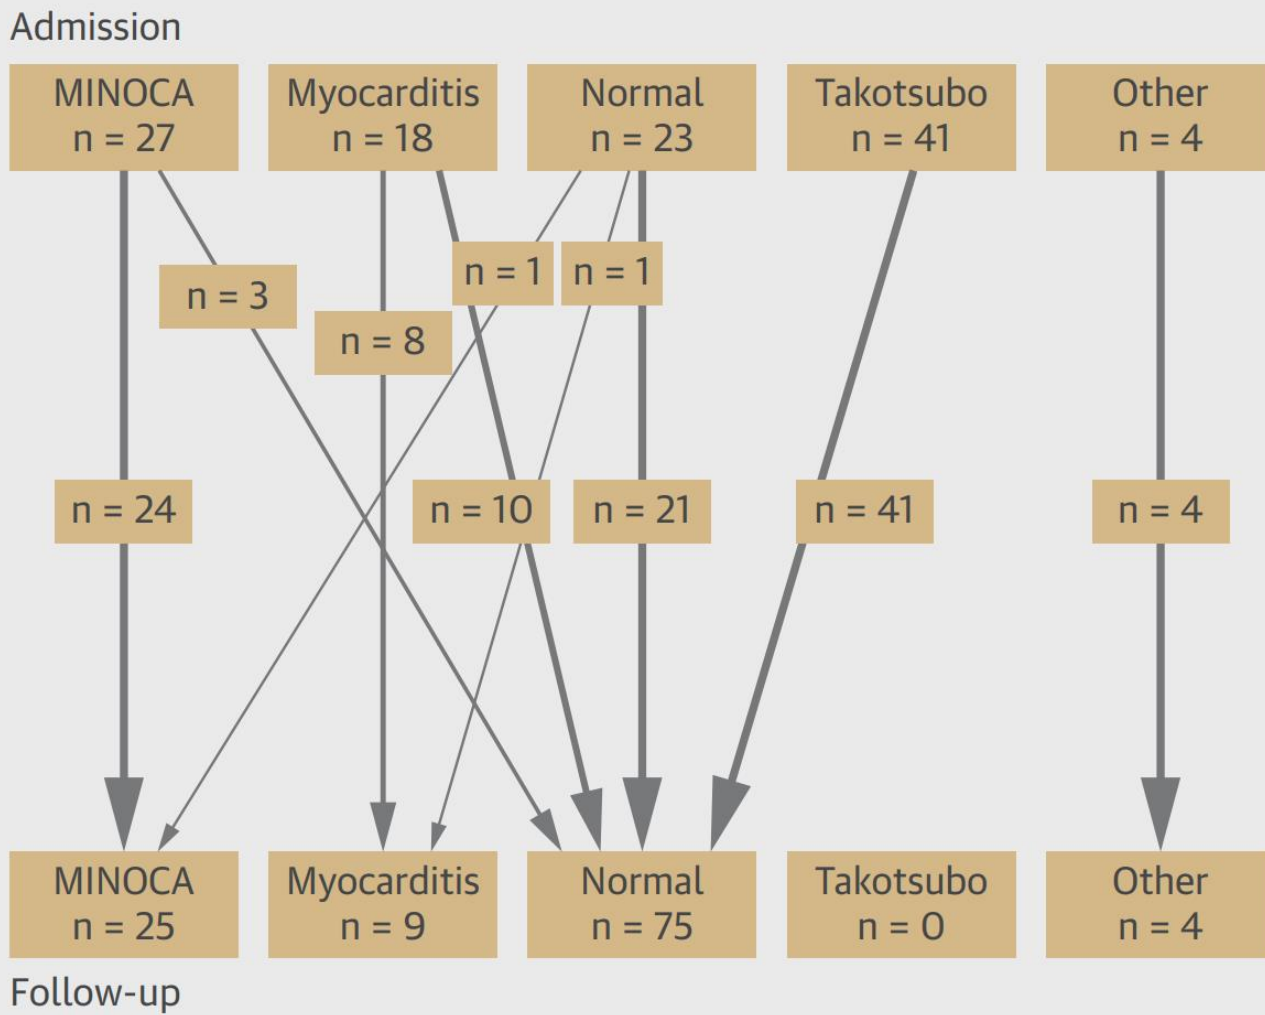

252 acute CP pts with + Trop and no coronary stenosis followed for > 10 years
 MINOCA unlikely were excluded

No. at risk	0	2	4	6	8	10	12
AMI	63	44	32	28	20	13	9
Myocarditis	33	25	19	18	16	15	9
NICM	111	74	56	49	35	29	19
Normal CMR	37	33	27	25	17	15	9

CMR during acute (days) and chronic (3 month) phases

N=110 acute CP, + trop

Summary

- Co-registered multi-component imaging by CMR can differentiate the etiologies of acute but stable CP patients with positive troponins.
- CMR can diagnose about 70-80%, with myocarditis and non-ischemic cardiomyopathies accounting for ~50%, MINOCA ~25%.
- Abnormality findings on CMR can become undetectable after initial weeks of tissue healing.
- A normal CMR during the acute phase is associated with a favorable clinical outcome.

Thank you

CMR indications in Chest Pain Syndromes in the *2021 AHA/ACC/ASE/CHEST/SAEM/SCCT/SCMR Guideline for the Evaluation and Diagnosis of Chest Pain*

Circulation 2021 Vol. 144 Issue 22

Acute chest pain

Class 1: Suspected MINOCA/myopericarditis

Class 1: Acute chest pain with no known CAD

Class 1: Acute chest pain with prior CABG

Class 2a: Acute chest pain with known CAD

Class 2a: Acute chest pain with known valve disease

Stable chest pain

Class 1: Stable chest pain with no known CAD

Class 1: Stable chest pain with obstructive CAD

Class 2a: Suspected INOCA

Class 2a: Stable chest pain with prior CABG

Class 2a: Stable chest pain and non-obstructive CAD
